

3rd ¹⁴C and diet conference *Oxford 20th – 23rd June, 2023*

The third ¹⁴C and Diet conference will be held at the University of Oxford 20th – 23rd June, 2023.

As in previous meetings, the focus of this conference will be on the relationships between radiocarbon, stable isotopes and diet. We welcome presentations that use radiocarbon and stable isotopes to explore diet, both in the past in fields such as archaeology and palaeontology, and in the present in forensics and ecology. We also welcome presentations that investigate the impact of dietary choice on the construction of reliable chronologies, and that explore the scale, variability and causes of radiocarbon reservoir effects in terrestrial, aquatic and marine contexts.

If you would like to suggest a session topic, please email the conference organisers by 30th November 2022.
